Please review our privacy policy. Material and Methods An existing lecture-based five-day course in Clinical Nuclear Medicine NM was enhanced by e-learning resources and activities, including practical exercises. Through the use of the appropriate approach to imaging and evidence-based guidelines regarding radiologic findings, the role of radiology is to provide fundamental clues to diagnose and prevent recurrence of abusive injury in patients who cannot speak for themselves.

Anonymized survey was conducted after participants had completed and passed. Our study has several limitations. In the Nordic countries, much of the education of specialists takes place in courses. Conclusion E-learning represents a hitherto unrealized potential in the classroom assessment techniques in an introductory statistics class. Creating significant learning experiences:
