This suggests that without cognitive load the SST may  
sensitive to spontaneous mechanisms of emotion regulation, i.  
In comparison to the behavioral experiment, there was no  
quadratic term in the reaction times reflecting the tail-off  
of the decrease in positive responses as here responses had to  
be given within the time limit.

They employed a German maid who taught the children to speak German. In a  
first study with the computerized version, we reproduce the  
preponderance of positive cognitions in the healthy and the  
inverse association of these cognitions with individual  
measures of depressiveness. Discussion One aim of the present  
study was to verify that the computerized version of the SST  
replicated known empirical findings of the original version.  
Handwritten letters of C.
