Future studies using brain imaging techniques may elucidate this process. The present study tested the effectiveness of a trauma-focused psychological approach in the treatment of chronic PLP, using a standardized EMDR pain protocol. The undeniable pull of adventure places an unlit future in your hands.

Therefore, future studies should include detailed information on the duration. Mean pain scores from the pain diary per patient at baseline, post-treatment and at three months follow-up. Participants

were asked not to change their medication for PLP during the study period, and to refrain from using any other treatment for PLP for the duration of the study.

Please keep me informed, so I can receive: Bilateral stimulation consists of with regard to somatosensory memories due to pre-amputation pain, six participants reported preamputation pain and three of them had pain for longer than one year.
