Clinical approval correlated with approval for furthering xenotransplantation. The precautionary principle is defined as the principle for making practical decisions when the condition has scientific uncertainty. Experimental protocols describing research on either patients or animals are reviewed by committees at the institution where the work is to be performed.

The ethics debate in relation to xenotransplantation. It is this identity of a patient as a research subject, in conjunction with a history of misconduct in medical science as evidenced by the Nazi medical experiments and the Tuskegee syphilis study, which leaves many plausible research groups wary of participation in xenotransplantation studies.
