Inflammation triggers synaptic alteration and degeneration in experimental autoimmune encephalomyelitis. The steroid and xenobiotic receptor SXRbeyond xenobiotic metabolism.

FromBasicstoDisease.We first conducted SNP-level association tests for the trio data using the likelihood ratio test LRT and obtained SNP level summary statistics and then conducted a gene-level GWAS on the summary statistics using a hierarchically structured prior that incorporates the SNP-gene hierarchical structure. Novel translational approaches are emphasized, applicable to both the laboratory bench top and the patient's bedside.
